Plagiarism: case studies, roots, detection and prevention

Organisations concerned with plagiarism

Council of Science Editors

European Association of Science Editors

Definitions of plagiarism

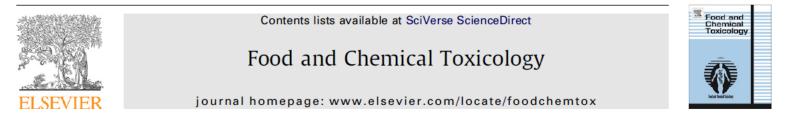

*To copy another person's words or work and pretend that they are your own (*The*

Oxford advanced learner's dictionary, 6th edition, 2000)

- *To use another person's ideas or expressions in your writing without acknowledging the source (MLA handbook for writers of research papers, 1995)
- A form of piracy that involves the use of text or other items (figures, images, tables) without permission or acknowledgment of the source of these materials (CSE)

"...in addition to text and data, plagiarism also includes the misappropriation of a wide range of others' intellectual property, including ideas, images, and methodologies."

Food and Chemical Toxicology 50 (2012) 3385-3387

Editorial

Avoiding unethical writing practices

Explanations of instances of plagiarism Academic 'My English is laziness' very poor, so I thought it was better to use the words of someone senior to me

Harvey Marcovitch, former chair of COPE

Cross M. Policing plagiarism. BMJ 2007;335:963 doi: 10.1136/bmj.39388.668773.47 Kleinert S. Checking for plagiarism, duplicate publication, and text recycling. Lancet. 2011;377:281–2. doi: 10.1016/S0140-6736(11)60075-5.

Intentional intellectual theft

- ✓ Steeling unpublished ideas, methodology or text from manuscripts or grant proposals under review by reviewers
- ✓ Steeling images or tables from open-access sources (including those for lectures from the Internet)
- ✓ Appropriation of others' research ideas and suggestions expressed at informal discussions in a department without an acknowledgement

Unintentional misconduct in writing

- ✓ Inappropriate summarizing (without reading full text of a primary source)
- ✓ Inappropriate paraphrasing (changing a few words in an original text)
- ✓ Inappropriate or lack of citations and quotations

Proper citation and quotation

- ✓ When passages from published texts are copied word for word, these should be enclosed in quotations marks and linked to a reference.
- ✓ Refer to the commonly used citations and references guides (e.g. APA citation guide

Publication Manual of the American Psychological Association, 6th ed. Washington, DC: American Psychological Association, 2010.
http://www.lib.monash.edu.au/tutorials/citing/apa-a4.pdf

Self-plagiarism

- Recycling one's own published text, research data, figures and tables (even if proper citations are provided)
- Duplicate publications as a result of submitting the same manuscript to several journals (*exclusion publication of an article based on a conference abstract or presentation; notes should indicate such an instance*)
- 'Salami' or 'augmented' publications

Limits of self-plagiarism

- <10% of verbatim text recycling (particularly in Methods section) is acceptable by most experts
- Up to 15-20% by a few experts
- >30% unacceptable

Kravitz RL, Feldman MD. From the Editors' Desk: Self-Plagiarism and Other Editorial Crimes and Misdemeanors. J Gen Intern Med 2011;26(1):1.

Types of Scientific Misconduct Description "Making up data or results and recording or reporting them"7 1 Fabrication 2 Falsification "Manipulating research materials, equipment, or processes, or changing or omitting data or results"7 Plagiarism Using another person's ideas, processes, or results without giving appropriate a. Plagiarism of ideas credit Using another person's words without giving appropriate credit⁷ b. Plagiarism of text i. Without citing the source Verbatim copying Using the text or any materials of others without acknowledging the source Using the text of others with a few changes or mixing the others' texts without Paraphragiarism acknowledging the source(s) ii. With citing the source - Verbatim copying Using exact words of others with citing the origin but without using quotation marks Inappropriate paraphrasing Using texts of others while citing the origin but only with minor changes in the words or structure Copyright infringement Using a large part of others' words (in quotation marks) that violates the copyright Self-plagiarism[†] a. Duplicate publication Publication of paper that are identical or the same in hypothesis, results, and conclusions b. Salami publication Publication of each part of the results of one study in several papers Using one's own text in several different papers c. Practice of text recycling

Table 1. A classification of scientific misconduct*

*Adapted from the paper by Roig and the definitions of the Office of Research Integrity.^{6,7} The definitions are applicable for any part of a written work (text, table, figure, etc.) and are regardless of the extent (either a sentence, a paragraph, or a large body of the text); †Self-plagiarism is considered either as an independent entity or as a subcategory of plagiarism. Here, it was not possible to include it under the plagiarism classifications just because of the nature of this classification.

Farrokhi F. Plagiarism: Where Unawareness Makes a Lame Excuse. Arch Iran *Med* 2009; *12* (2): *176* – *178*

Reasons for plagiarism

- Deliberate when the writer makes the decision to steal someone else's work because of the lack of time or poor writing skills. It is when the writer is
- copying from a book, a journal, or a website,
- asking another person to do the work for you,
- downloading the complete text from the Internet

Academic writing: Avoiding plagiarism

Reasons for plagiarism (2)

Academic writing: Avoiding plagiarism

- Accidental plagiarism accidentally, through carelessness, or lack of skill copying words without acknowledging it
- It is when the writer
- does not know that direct copying is incorrect,
- does not have skills for expressing others' ideas in own words
- forgets or does not have time to acknowledge another person's words or ideas

- Outright copying using exactly the same words from the original source without putting quotation marks or acknowledging the source
- Paraphrase plagiarism changing some of the words but leaving most of the original text the same
- Patchwork plagiarism original author's words are used and connected together in a slightly different way
- Stealing an apt term using a short phrase from the original source, because it looks good

Plagiarism detection

 Google search
 Checking by colleagues/coauthors, "Whistleblowing" by readers

 Plagiarism detecting softwares
 FREE: Chimsky, CopyTracker, eTBLAST, plagiarism-detect.com, Plagiarismchecker, SeeSources
 COMMERCIAL: iThenticate, Copyscape, Plagium, Turnitin Time-consuming, useful for small text articles; not suitable for extensive reviews

 Detection subject to the availability of sources tracked by software

- A fee-based membership for publishers
- CrossRef provides links to primary research, assigns DOIs to articles, books, theses, conf. proceedings, and makes referencing more systematic
- Members have access to CrossCheck to detect plagiarism (more than 54000 members; the largest database)

Simple rules to avoid plagiarism

"Plagiarism is easy ... to avoid by simply not copying any printed sources and by writing original text in one's own words, and, if paraphrasing, citing the source"

Annals of Biomedical Engineering (© 2012) DOI: 10.1007/s10439-012-0662-9

Five Simple Rules to Avoid Plagiarism

HOLLY OBER,¹ SCOTT I. SIMON,¹ and DANIEL ELSON²

¹University of California, Davis, Davis, CA, USA; and ²Imperial College, London, UK

Simple rules to avoid plagiarism

- 1. Don't copy verbatim words from papers or books (even from your own).
- **2.** Write in your own words and style, minimize paraphrasing.
- **3.** When in doubt, cite. But avoid excessive citations, as it may indicate the use of others' ideas and words.
- 4. **Don't recycle graphics** without citing.
- 5. Ask permission to use graphics
- Ober H, Simon SI, Elson D.
- Five Simple Rules to Avoid Plagiarism. Ann Biomed Eng 2012

How to avoid plagiarism(1)

- "ALWAYS acknowledge contributions of others and the source of his/her ideas
- Any verbatim text taken from another author must be enclosed in quotation marks
- We must always acknowledge every source that we use in our writing; whether we paraphrase it, summarize it, or enclose it quotations
- When paraphrasing we must reproduce the exact meaning of the other author's ideas or facts using our words and sentence structure

How to avoid plagiarism (2)

- When in doubt whether a concept or fact is common knowledge, provide a citation
- Authors who submit a manuscript containing data already disseminated as an article in another journal, presented at a conference, posted on the internet must clearly indicate to the editors the nature of the previous dissemination
- If the results of a single complex study are best presented as a 'cohesive' single whole, they should not be partitioned into individual papers ('salami' publications)

How to avoid plagiarism (3)

- Authors are strongly encouraged to become familiar with basic elements of copyright law
- Authors should always ensure that each reference notation appearing in the body of the manuscript corresponds to the correct citation listed in the reference section
- Ensure that all elements of a citation (authors' names, volume number, pagination) are derived from the original paper, rather than from a citation that appears on a secondary source
- Do not rely on a secondary source (textbook) to describe the contents of a primary source"
